

Connect macOS to Wi-Fi (PEAP)

Step 1: Click the Wi-Fi icon and select “DTU SciencePark”.
Start connecting to WPA-Enterprise (802.1X).

Step 2: Confirm the initial certificate dialog ("Verify Certificate").

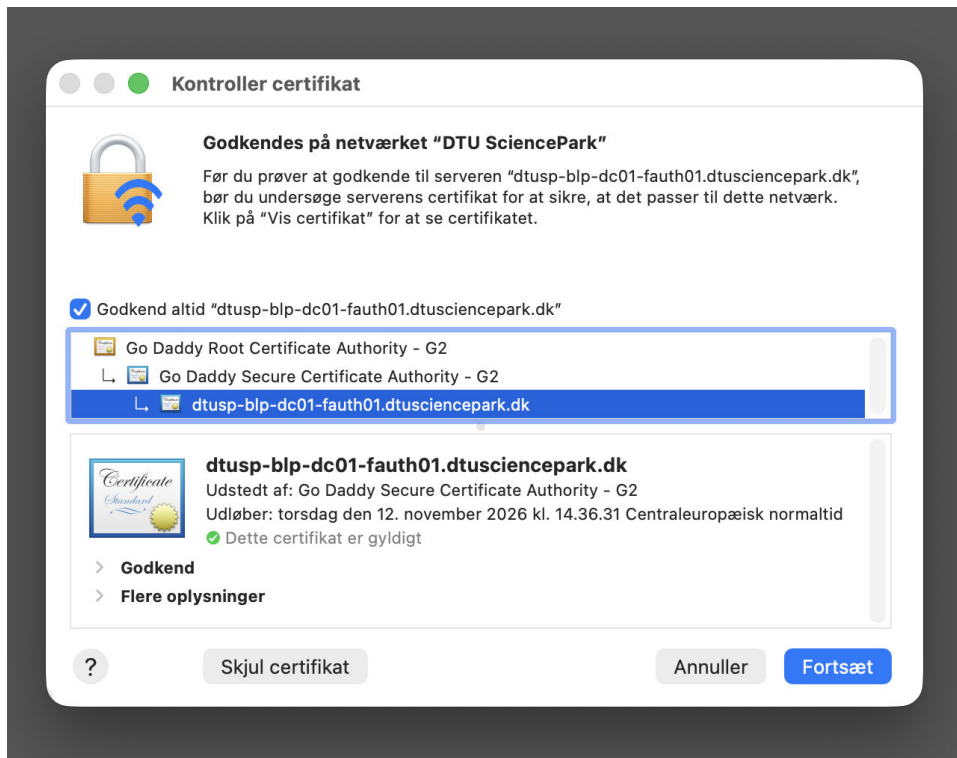

Click "Show Certificate" to view details, or "Continue" to proceed.

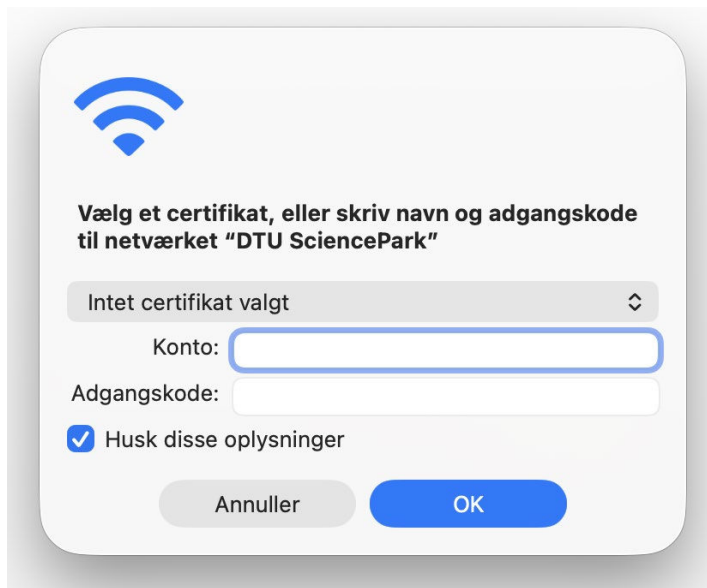

Step 3: Approve the server certificate.

Verify that the server name is "dtusp-blp-dc01-fauth01.dtusciencepark.dk" and the issuer is "Go Daddy Secure Certificate Authority - G2".

Optionally check "Always trust ..." and click "Continue".

Step 4: Log in with your username and password.

The image shows a mobile login dialog box with a white background and rounded corners. At the top left is a blue Wi-Fi icon. Below it, the text reads: "Vælg et certifikat, eller skriv navn og adgangskode til netværket "DTU SciencePark"". Underneath is a dropdown menu with the text "Intet certifikat valgt" and a small diamond icon. Below the dropdown are two input fields: "Konto:" followed by a text box, and "Adgangskode:" followed by a text box. Below the input fields is a checked checkbox with the text "Husk disse oplysninger". At the bottom are two buttons: "Annuller" (grey) and "OK" (blue).

Step 5: Verify connection.

"DTU SciencePark" will appear as a known/connected network under Wi-Fi.
